

**This driver is reading emails,
& responding to them without
taking her hands off the wheel
or her eyes off the road.**

Automated Unified Messaging...

Imagine you're stuck in traffic and you're running late for a business meeting, by using simple voice recognition instructions Unified Messaging can be activated, for example, by simply saying 'email' the fully automated system kicks in, "send email to John, Peter, Mary, Paul, Jane" the system will open your address book and select the relevant information and will then respond by asking what message you'd like to be emailed, "Caught in traffic, I will be twenty minutes late" The system automatically sends the email informing of your delay. You can also request your emails which Unified Messaging will open from your inbox, it will read these to you by converting the text into speech, it really has to be heard to be believed. It's like having your very own personal secretary with you 24 hours a day seven days a week. And that's not all the system will also keep diary dates, make appointments on your request, store voice mail messages, the future is here the future is Automated Unified Messaging.

Find out how you can implement Unified Messaging without overhauling your existing infrastructure by calling Digital IP on -

0845 2700 484 or email sales@digital-ip.com
